

SEEMA ALMAS YUNUS SHAIKH

TECHNICAL LEAD | FRONTEND ARCHITECT | ASPIRING SOLUTION ARCHITECT

Mobile No: 9172780700

E-mail: Seemaalmasshaikh@gmail.com

Address: Pune, IN

Date of Birth: 04-07-1990

LinkedIn: <https://www.linkedin.com/in/seema-almas-shaikh/>

Frontend-focused Technical Lead with 11+ years of experience building and modernizing enterprise-scale applications. Proven leader in frontend architecture, performance optimization, and zero-defect delivery, with growing ownership of system design and architectural decisions. Actively mentoring teams and evolving toward Solution Architecture and Engineering Leadership roles.

PROFESSIONAL SUMMARY

- Technical Lead with 11+ years of experience delivering frontend-heavy enterprise applications across banking, consulting, and product domains.
- Demonstrated success in driving large-scale UI modernization initiatives, including framework upgrades, Redux enhancements, and performance tuning in high-visibility systems.
- Strong hands-on background in React, Redux, and frontend platform engineering, with proven results in stability, scalability, and zero-defect production releases.
- Experienced in building proofs of concept and innovation initiatives, including GenAI integrations, document automation, and Jira-based workflow enhancements.
- Applies system design and architectural thinking to frontend platforms, focusing on backend-driven UI, caching strategies, API integration, and long-term maintainability.
- Recognized as a dependable technical owner who partners effectively with product, backend, QA, and business teams to deliver predictable outcomes.

WORK EXPERIENCE

Citi Corp

Assistant Vice President (Pune, India) (Dec 2022 - Present)

As an Assistant Vice President, owned technical leadership for the UI platform, taking responsibility for frontend architecture, system modernization, and delivery quality. Led architectural initiatives including framework upgrades, performance optimization, backend-driven UI design, and microfrontend adoption, while mentoring engineers and ensuring alignment between business requirements, non-functional requirements, and long-term platform stability.

- Owned frontend technical leadership for enterprise UI platforms with accountability for architecture, performance, and stability.
- Led React and Redux framework upgrades, improving runtime performance and reducing technical debt.
- Designed and implemented client-side caching strategies, reducing redundant API calls and improving UI responsiveness.
- Delivered GenAI POCs integrating AI APIs with React applications for document analysis and automation use cases.
- Built a POC integrating Jira and AI pipelines to extract and enrich missing fields from editable PDF documents.
- Collaborated with backend teams on API contracts, data ownership, and backend-driven UI patterns.
- Actively applied system design principles including scalability, caching, synchronous vs asynchronous flows, and failure handling.
- Mentored engineers, conducted design and code reviews, and ensured adherence to architectural standards.

Achievements:

- Initiated and delivered a React-Redux modernization program for a legacy enterprise application, significantly improving runtime performance and application stability while achieving zero production defects, an outcome formally appreciated by senior leadership.
- Implemented client-side caching strategies as part of the Redux upgrade, reducing redundant API calls and materially improving UI responsiveness in high-traffic and business-critical workflows.
- Designed and implemented a backend-driven UI rule engine, moving conditional UI logic to backend-controlled rules, enabling faster rule changes, reducing frontend complexity, and improving long-term maintainability across releases.
- Led the migration from a monolithic SPA to a Microfrontend architecture, enabling independent deployments, clearer module ownership, improved scalability, and faster parallel development across teams.
- Delivered a GenAI-based proof of concept for document analysis, integrating prompt-based AI APIs to identify missing or incomplete fields in editable PDF documents; the solution was recognized by management as a viable automation opportunity.
- Recognized by leadership for driving architectural improvements, improving delivery predictability, and consistently raising technical and engineering standards within the team.

Ernst & Young

Senior Technology Consultant (Pune, Maharashtra) (Oct 2021 - Nov 2022)

Owned technical and delivery responsibility for UI-focused projects, including team guidance, task prioritization, and quality control. Responsible for translating project goals into executable technical plans, maintaining delivery discipline, and ensuring solutions met functional, performance, and stability expectations while working closely with cross-functional stakeholders.

- Led UI-centric projects with responsibility for technical design, delivery planning, and quality control.
- Designed reusable UI and API integration components, improving development efficiency.
- Owned end-to-end delivery from requirements to production with zero-defect releases.
- Actively participated in design discussions and architectural decision-making.
- Coordinated with cross-functional teams to ensure predictable and stable delivery.

Achievements:

- Successfully delivered multiple zero-defect UI projects, improving delivery reliability and strengthening client confidence.
- Improved overall delivery consistency and team effectiveness by enforcing clear execution practices and technical ownership.
- Recognized for driving practical process improvements that reduced rework and improved project outcomes over successive releases.

One Network Enterprises

Senior Software Engineer (Pune, Maharashtra) (Sep 2020 - Sep 2021)

Contributed as a frontend engineer within a cross-functional development team, with responsibility for implementing and improving UI components and user flows for client-facing applications, primarily in the supply chain management domain.

- Developed and optimized UI components for supply-chain enterprise applications.
- Collaborated with backend and product teams to align UI behavior with business workflows.
- Simplified complex domain requirements into usable and performant frontend solutions.

Achievements:

- Delivered performant and reliable UI solutions within tight project timelines, meeting client expectations.
- Built strong working relationships with clients and internal teams, contributing to smoother execution and fewer requirement gaps.
- Recognized for simplifying complex domain requirements into clear, usable frontend implementations.

Infosys Limited

Lead UI Developer (Pune) (Aug 2017 - Aug 2020)

Led a UI development team with responsibility for delivery planning, technical execution, and adherence to defined requirements and engineering standards. Accountable for translating requirements into implementable UI solutions, maintaining code quality, and coordinating with cross-functional teams to ensure reliable project execution.

- Led end-to-end UI development for the Speedboat project, owning requirement analysis, design decisions, and implementation of feature enhancements.
- Authored high-level design documents to define UI structure, data flow, and integration points with backend services.
- Defined and implemented API integration strategies to ensure reliable communication between frontend and backend systems.
- Designed and implemented data models using LoopbackJS to support efficient backend connectivity and maintain consistent data relationships.
- Mentored and supervised a team of 9 developers, reviewing code, enforcing standards, and supporting skill development.
- Built a custom Gulp utility to automate repetitive file system tasks, reducing manual effort and improving team productivity.
- Coordinated with product, backend, and QA teams across all phases of the SDLC to ensure aligned and predictable delivery.

Achievements:

- Successfully delivered the Speedboat project with stable functionality and consistent UI quality, meeting client expectations and delivery commitments.
- Improved team execution and code quality through structured mentoring and clearer development standards.
- Received formal recognition for effective team leadership and measurable improvement in team performance.

The Digital Group Infotech Pvt. Ltd

Associate Software Engineer (Pune) (Apr 2014 - Jul 2017)

Worked as a Full Stack Developer responsible for implementing frontend features, supporting backend functionality, and improving application performance and usability within an existing system.

- Contributed to frontend and backend development to enhance overall system functionality.
- Performed module-level testing and code optimization to improve application performance and reliability.
- Designed and implemented the application homepage, improving layout structure and navigation flow.
- Developed custom AngularJS directives to support reusable UI behavior.
- Implemented a date picker component to enable dynamic and user-friendly date input.
- Integrated Google Charts using AngularJS to provide interactive data visualizations.
- Participated in design discussions, development cycles, and module integration activities to support end-to-end delivery.

Achievements:

- Improved application usability and functionality through consistent frontend and backend enhancements.
- Contributed to improved application stability by supporting testing, performance tuning, and code optimization efforts.

SKILLS

Technical Skills: HTML5, CSS3, JavaScript(ES6+), ReactJS, Redux, NodeJS, MongoDB, Polymer JS, Python, RTK Query, Micro-frontend Architecture, Frontend Performance Optimization & Caching, Component-driven UI Design, Rule-driven UI Architectures, API Design & Versioning, REST APIs

Soft Skills: Communication, Teamwork, Leadership, Problem-solving, Communication, Agile / Scrum Delivery Leadership, Architecture Reviews & Design Discussions, Cross-team & Stakeholder Collaboration, Technical Mentorship & Code Reviews

EDUCATION

Babasaheb Naik college of engineering Pusad, Amravati University, Maharashtra (2008-07 - 2012-07)

B.E: Computer Science and Engineering

CERTIFICATIONS

- Azure AZ900 (Microsoft - 2022)

ACHIEVEMENTS

- Consistently achieved near-perfect on-time delivery for assigned modules, significantly reducing defects, enhancing client satisfaction, and contributing to improved project KPIs.
- Launched and successfully led the innovative SpeedBoat project, earning recognition for its user-centric design approach, seamless execution, and efficient project management practices.

HOBBIES

Exploring emerging technologies like AI, Blockchain, and DevOps through online communities and self-projects, Writing technical blogs and tutorials to share knowledge and contribute to the developer community,

Engaging in fitness activities like running and yoga to maintain focus and a healthy work-life balance,
Volunteering for tech mentorship programs and coding workshops for young learners

LANGUAGES

English, Hindi, Marathi
